

ABSTRACT OF THE DISCLOSURE

A packaging wrap is provided for meat products, in particular for boiled ham or pickled products, wherein the packaging wrap is insoluble in water, suitable for a cooking
5 process, and comprises a foil that is permeable to gas, steam and/or smoke. Against the side of the foil facing away from the meat product, a net can be placed to increase its strength. The foil comprises a thin-walled fibrous foil having a maximum area weight of about 120 g/m^2 and an anti-adhesive coating on its side facing away from the meat product. The anti-adhesive coating is made of a material that is safe in accordance with food packaging regulations and prevents
10 the meat product from binding with the packaging wrap during the cooking process.
